

## **Apron Feeder Pans**

*Unicast Apron Feeder Pans are cast in work-hardening alloy for exact fit and outstanding wear life.*

---

### **APRON FEEDER PANS**

Unicast Apron Feeder Pans are cast for exact fit and outstanding wear life making them a top choice for mining facilities around the world.

### **ONE-PIECE PRECISION CASTING**

Cast using the V-Process molding technique creating accurate dimensions and a good surface finish.

The one-piece casting method eliminates failure due to weld cracks—a common problem with traditional fabrication—ensuring greater durability and wear life.

### **WORK HARDENING ALLOY**

Heavy-duty cast Austenitic Manganese Steel (M2) for high impact resistance. Save in replacement costs and downtime with apron feeder pans that get stronger the harder you work them! Cast using a heavy duty alloy that work hardens under high-load conditions and impact for maximum wear life and reduced maintenance.

### **EXACT FIT**

The bolting surfaces are machined to ensure 100% contact when assembled to the drive chains.

### Feeder Wear Parts

# UNICAST

REDEFINING WEAR PARTS

*Cast replacement wear parts  
with improved wear life.*

250-807-7999

wearparts@unicast.ca

UNICAST.CA

### RECESSED-HEAD BOLT HOLES

Recessed-head bolt holes protect bolt heads for longer wear life.

### HEAT-TREATED

Heat-treated for Maximum Ductility

### TESTED BEFORE DELIVERY

Test-assembled at the factory to identify any fit problems long before material is installed on site.

### FEATURES & BENEFITS

- Cast not to crack! No welds eliminates risk of failure at joins.
- Cast in work-hardening manganese steel (M2) - gets stronger the more it's used.
- Performance features such as heat treating, and recessed bolt holes extended wear life even further.
- Tapered design to reduce product build up.
- Interchangeable with other proprietary pans for convenience.
